ERNEJOYSON CO. LTD POULTRY REARING CHART GUIDE

BETTER ANIMAL HEALTH, BETTER FARM PERFORMANCE

PLEASE NOTE:

1. *This program acts as a guide and can be adjusted as and when circumstances necessitate such changes or additions, with the help of your veterinary advisor.*
2. *Coccidiostat has been balanced between Amprolium based, Sulphur based and herbal based in order to give you a balanced protection against all stages of coccidiosis without interfering with production.*
3. *Debeaking at 8 or 15 weeks is recommended but it can also be done on the 4th day when the equipment is available. However, where pecking gets rampant, Debeaking can be arranged to reduce the incident.*
4. *The use of antibiotics should be very specific following a Vets prescription and possibly backed by sensitivity test from the vet lab.*
5. *Regular cleaning and disinfection of feeders, drinkers and the pen is strongly recommended.*
6. *Deworm regularly every TWO months and give anti-stress after each deworming.*
7. *Check for lice, fleas, mites and ticks occasionally, and delouse when necessary. Give anti-stress after treatment.*
8. *Seek veterinary professional advice and don't give drug haphazardly to your birds.*
9. *Give anti-stress after vaccination.*
10. *After 3rd NCD vaccine, repeat after every THREE months.*
